# Introduction

## Why NFC tags with sensing capabilities?

- Energy Harvesting => No batteries required
- NFC is very popular on Android devices
- Cost saving
- Possibility to laminate and sterilize the device
- Construction in flexible substrates
- Only a smartphone and the tag is required
- Easy to use

# Introduction

## Related NFC radiation dosimeters

### Our previous work

- Interchangeable MOSFET sensor module based on ZVP3306
- Small size
- NFC band: 13.56 MHz
- NFC chip as controller

### Other examples

- ID-card-size dosimeter for continuous personnel monitoring (range of cGy)
- Based on phototransistors and film badges
- NFC band: 13.56 MHz
- NFC chip + microcontroller

# Motivation:

## Our Goal

- To develop a battery-less NFC tag reader for MOSFET dosimeters.  
Improve and upgrade the previous system.

- Cost saving
- MOSFETs have a good linear response to radiation
- MOSFETs low current consumption
- No batteries or wires are required
- Potential application in radiotherapy treatments
- Small size
- User-friendly interface. Easy to use

# Our system:

# NFC tag: block diagram

# NFC tag: Size comparison

pMOS sensor

# NFC tag: functional blocks

- Ultra-low consume (3.3 mW)

# NFC tag: RFID chip

## M24LR64E

- Manufacturer: STMicroelectronics
- Energy Harvesting
- 64 kB EEPROM memory, that can be written and read via NFC or I2C
- ISO 15693 and ISO 18000-3

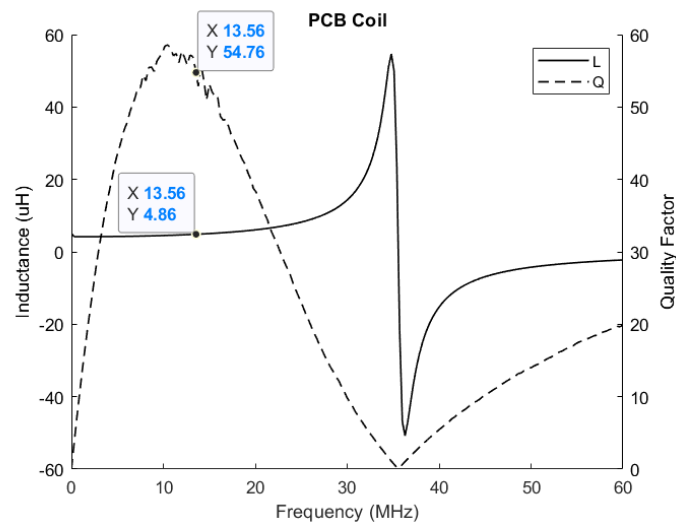

An interrupt can be generated to the microcontroller

# NFC tag: Antenna

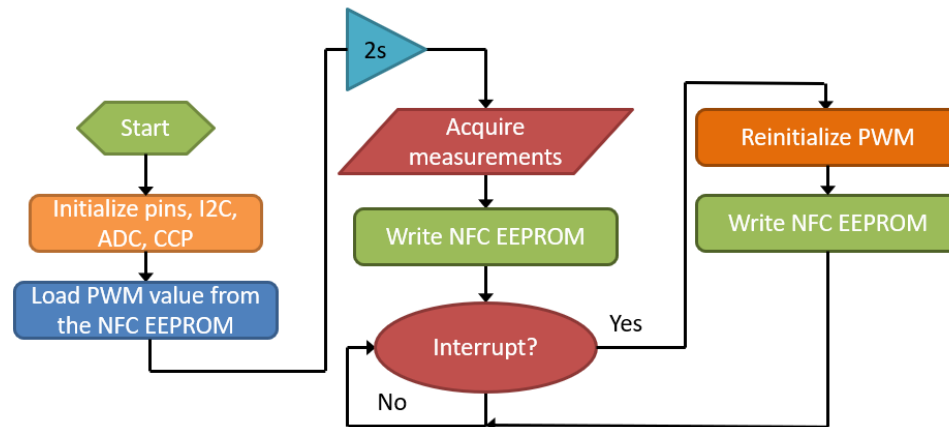

- Antenna:  $L_{PCB} \parallel C_{M24LR64E}$ 
  - $C_{M24LR64E} = 27.5 \text{ pF}$  (theoretical), for resonance at 13.56 MHz  $\rightarrow L = 5.01 \mu\text{H}$
  - $L_{PCB}$ , 10 turns  $\rightarrow 4.86 \mu\text{H} \rightarrow$  resonance at 13.62 MHz
  - Can be corrected with a parallel capacitor
  - $R_s \rightarrow 2.45 \Omega$

# NFC tag: Microcontroller

## PIC16LF1703 eXtreme Low-Power series (XLP)

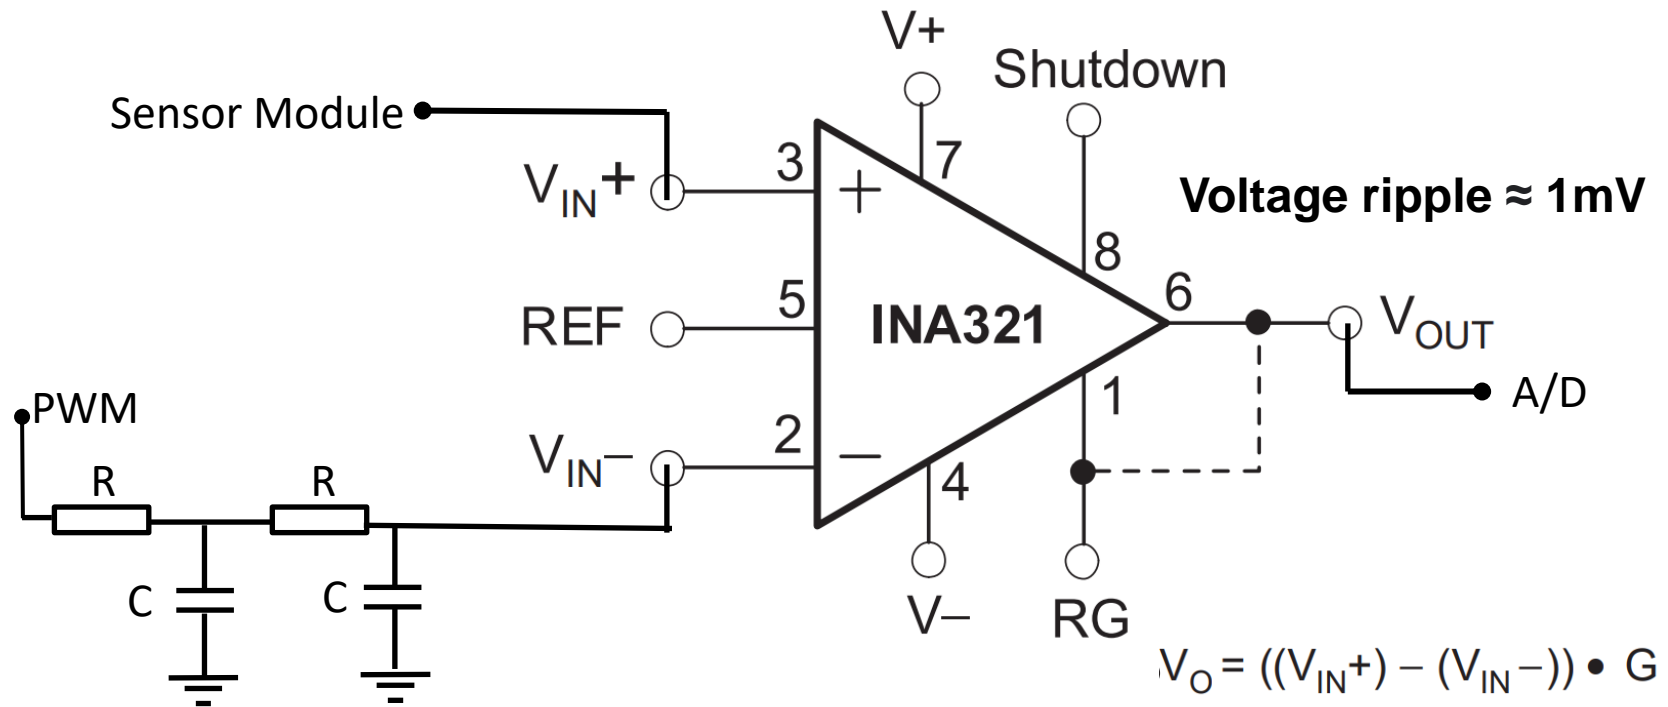

- Manufacturer: Microchip
- Operating current: 32uA/ MHz @ 1.8 V typical
- Operating voltage range: 1.8V to 3.6V
- Serial communications: SPI, I2C
- 10-Bit Analog-to-Digital Converter (ADC)
- Compare/Capture/PWM module (CCP)

# NFC tag: Tag IA

## INA321

- Manufacturer: Texas Instruments
- Low quiescent current: 40  $\mu\text{A}$  per channel.
- RAIL-TO-RAIL
- Low offset voltage: 200  $\mu\text{V}$
- High CMRR: 94 dB
- Supply voltage: 2.7 to 5.5 V

# NFC tag: Analog circuitry

## Buffer and signal conditioning:

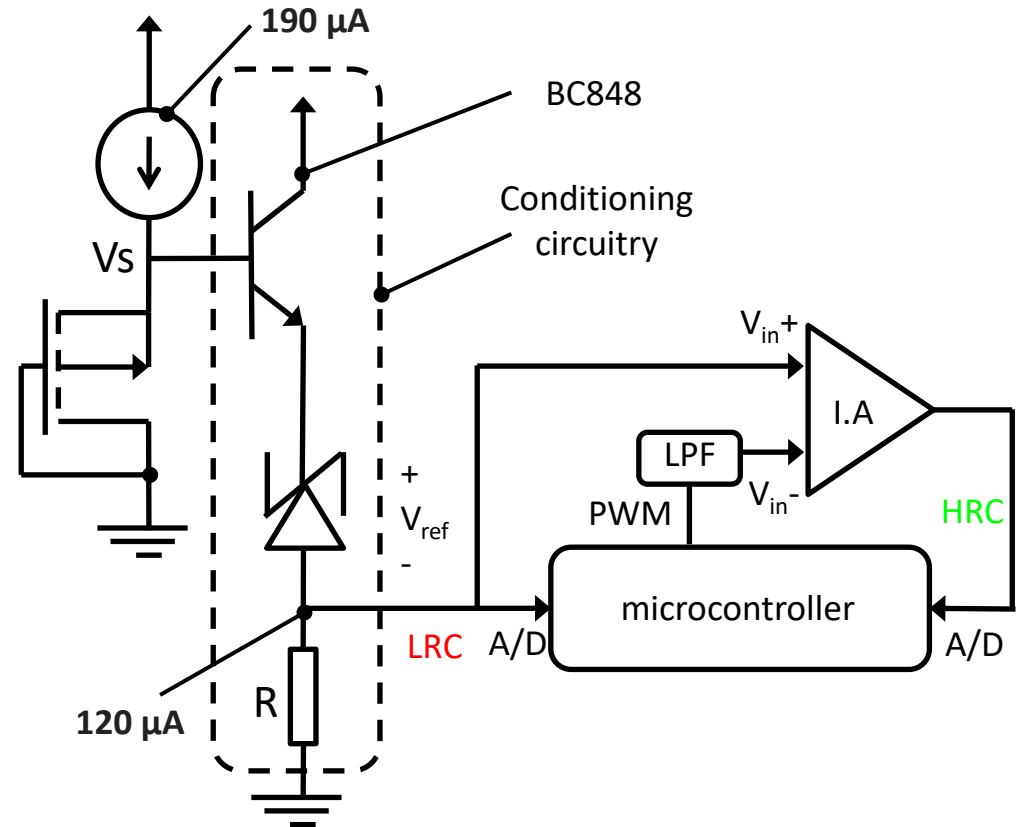

- Avoid the source current subtraction
- Thermal compensation
- To reduce the emitter voltage down to the 0.9-1.5 V range.

$$V_{in}^{ADC} = (V_S - V_{BE} - V_{ref})$$

$$\left. \begin{aligned} \Delta V_{in}^{ADC} &= \alpha \Delta T \\ \Delta V_S &= \alpha_S \Delta T \\ \Delta V_{BE} &= \alpha_{BE} \Delta T \end{aligned} \right\}$$

$$\alpha_{LRC} = (\alpha_S - \alpha_{BE})$$

$$\alpha_{HRC} = (\alpha_S - \alpha_{BE}) + \alpha_{IA}/G$$

Low Resolution Channel (LRC)

High Resolution Channel (HRC)

# NFC tag: Analog circuitry

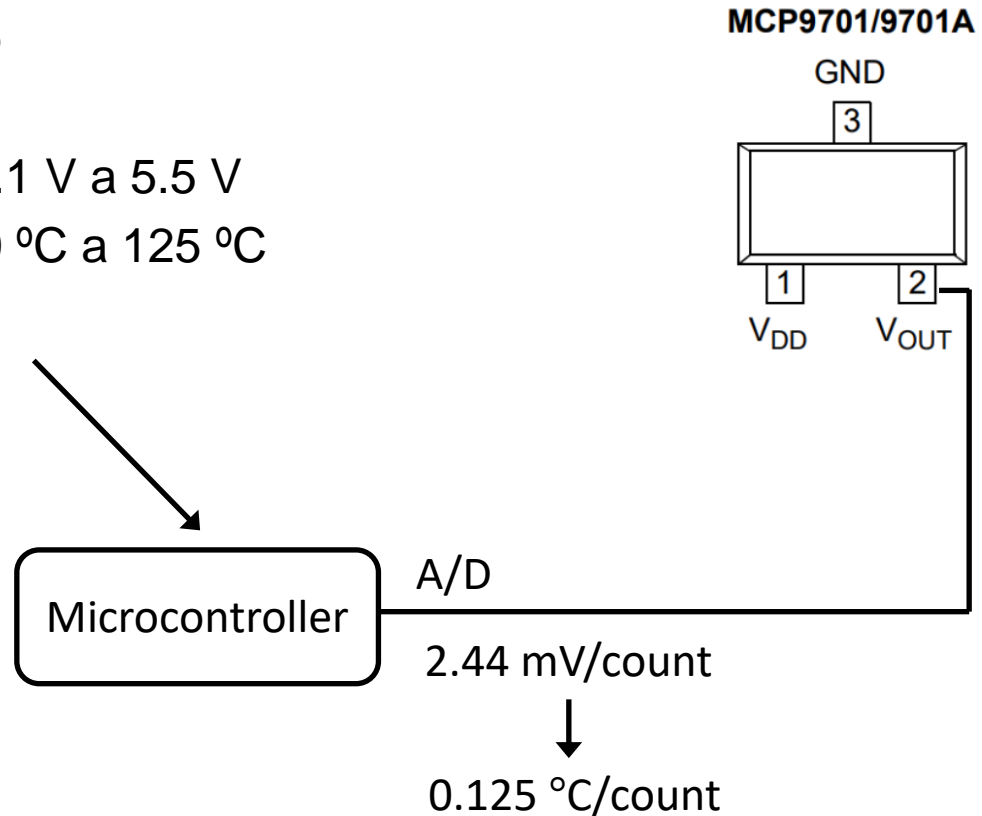

## Reduction of thermal drift

	$\alpha_S \text{ (mV/}^\circ\text{C)}$	$\alpha \text{ (mV/}^\circ\text{C)}$	Reduction (%)
$V_S$ (LRC)	$-1.76 \pm 0.33$	$-0.45 \pm 0.08$	75 %
Amplificated $V_S$ (HRC)	$-1.76 \pm 0.33$	$-0.32 \pm 0.05$	82 %

# NFC tag: Temperature sensor

## MCP9701A

- Manufacturer: Microchip
- Quiescent current: 6  $\mu\text{A}$
- Supply voltage range: 3.1 V a 5.5 V
- Temperature range: - 40  $^{\circ}\text{C}$  a 125  $^{\circ}\text{C}$
- Sensitivity: 19.5 mV/ $^{\circ}\text{C}$

# NFC tag: Power management

## Current source and supply:

- Based on LM334 (Texas Instruments, USA)
- Circuit for thermal compensation suggested by the manufacturer
- Load: Resistor of 12 k $\Omega$ , DC source from 2 to 8 V
- Minimum voltage: 4.5 V.
- The voltage regulator does not provide enough voltage
- Use of a DC/DC up converter

# NFC tag: Power management

## Voltage regulator MCP1824-2502

- Low quiescent current: 120  $\mu$ A
- Input Operating Voltage Range: 2.1V to 6.0V
- Typical Output Voltage Tolerance: 0.4%

	SOT-23	
Pin	Fixed	Adjustable
1	$V_{IN}$	$V_{IN}$
2	GND (TAB)	GND (TAB)
3	$\overline{\text{SHDN}}$	$\overline{\text{SHDN}}$
4	PWRGD	ADJ
5	$V_{OUT}$	$V_{OUT}$
6	—	—

## Unregulated voltage

# Voltage doubler

- Charge-pump DCDC converter: low quiescent current (600  $\mu$ A)
- ADM660: Voltage doubler, from 2.5 to 5.0 V

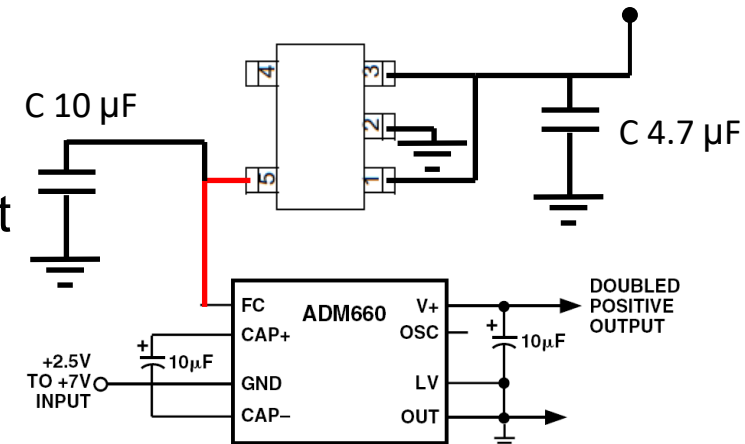

Figure 8. Voltage Doubler Configuration

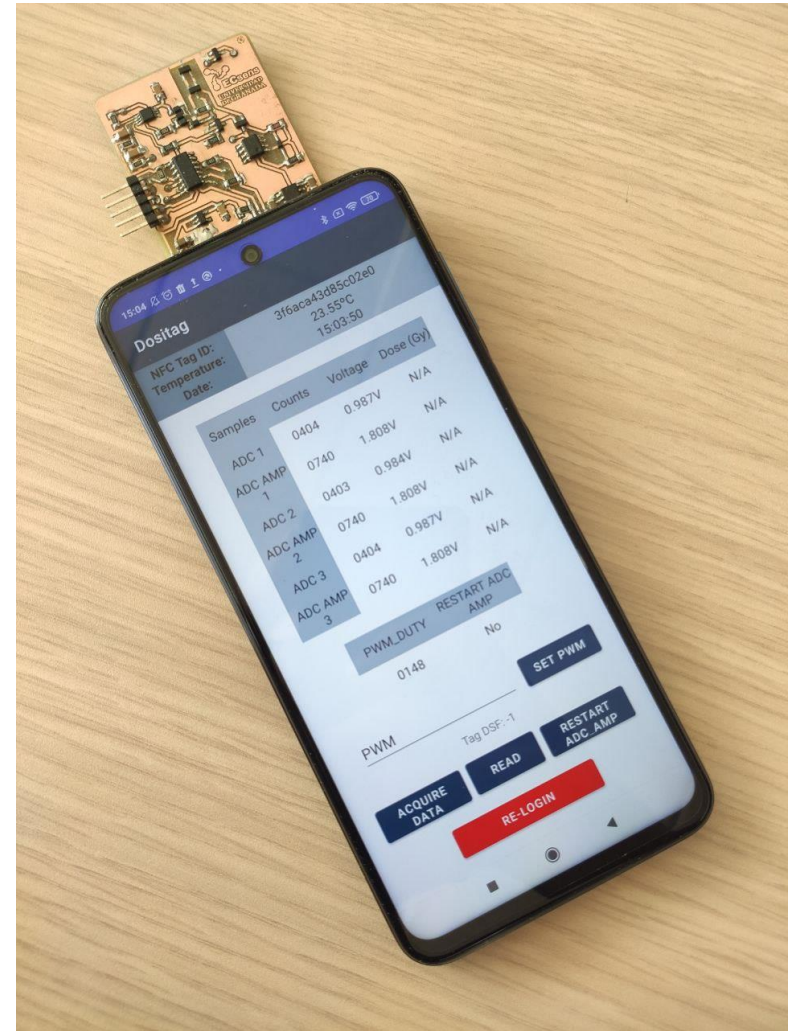

# Android App: Measurement protocol

1. The smartphone is placed on top of the tag

# Android App: Measurement protocol

↓
2. The system makes the zero.  
The smartphone is removed

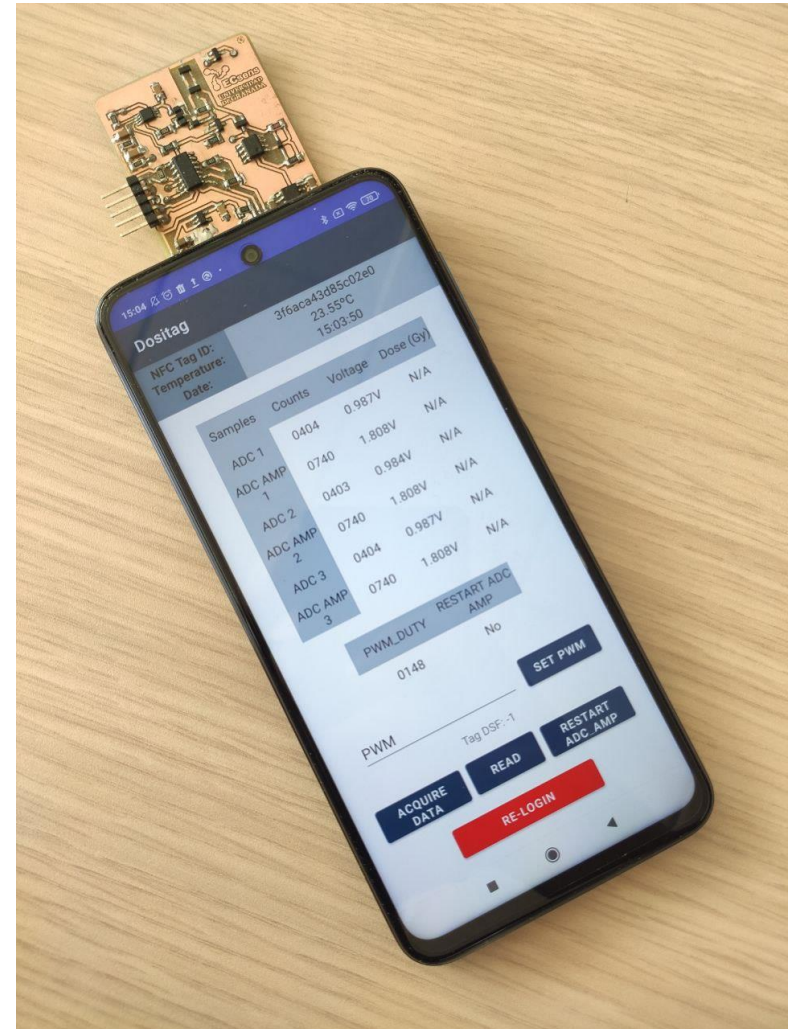

# Android App: Measurement protocol

1. The smartphone is placed on top of the tag  
↓
2. The system makes the zero.  
The smartphone is removed  
↓
3. The Smartphone is placed again. The system acquires the measurements.

# Android App: Measurement protocol

1. The smartphone is placed on top of the tag  
↓
2. The system makes the zero.  
The smartphone is removed  
↓
3. The Smartphone is placed again. The system acquires the measurements  
↓
4. Finally, the amplified and direct voltage shift is presented in the Smartphone

# Android App: Measurement protocol

1. The smartphone supplied the tag when it is placed on top of it and the coils are overlapped
2. Zeroing: The tag waits one second for the system to stabilize, and then:
  1. The PWM value is loaded from the EEPROM and set
  2. Direct and amplified Vs voltage are measured
  3. Direct and amplified Vs values are stored in the EEPROM of the NFC chip
  4. The values are read by the Smartphone when the user presses the “READ” button

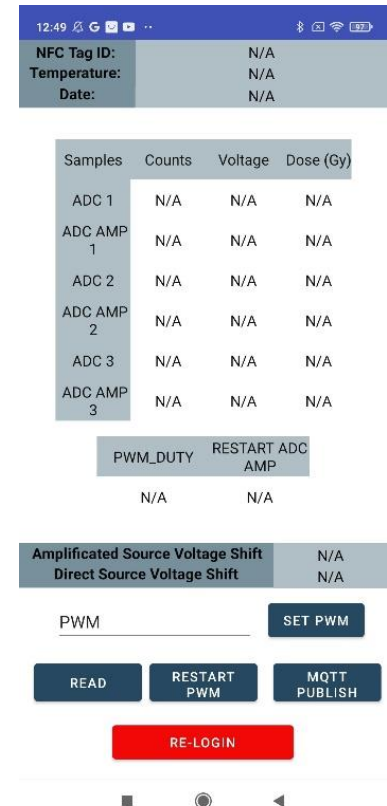

# Android App: Measurement protocol

3. **Dose measurements:** The smartphone is placed over the tag again. The measurement has been started when the tag waits one second

1. The PWM value is loaded from the EEPROM and set.
2. The direct and amplified source voltage are measured and stored in the EEPROM of the NFC chip.
3. The data are read by the smartphone from the NFC chip when the user press “READ” button
4. The user presses the “RESTART\_ADC\_AMP” button to reset the PWM to make the zero in the next measure

4. **Data presentation:** The Smartphone presents the current direct and amplified source voltage shift

$$V_{shift} = V_{S_{current}} - V_{S_{zeroing}}$$

The screenshot shows the Android app interface. At the top, the status bar displays the time 12:49 and various icons. Below the status bar, there is a section for NFC Tag ID, Temperature, and Date, all showing N/A. A table displays measurement data for three ADCs (ADC 1, ADC 2, ADC 3) and their corresponding counts, voltages, and doses (Gy). Below the table, there are buttons for PWM\_DUTY and RESTART ADC AMP, both showing N/A. At the bottom, there are buttons for READ, RESTART PWM, and MQTT PUBLISH, along with a RE-LOGIN button.

Samples	Counts	Voltage	Dose (Gy)
ADC 1	N/A	N/A	N/A
ADC AMP 1	N/A	N/A	N/A
ADC 2	N/A	N/A	N/A
ADC AMP 2	N/A	N/A	N/A
ADC 3	N/A	N/A	N/A
ADC AMP 3	N/A	N/A	N/A

PWM\_DUTY: N/A  
RESTART ADC AMP: N/A

Amplificated Source Voltage Shift: N/A  
Direct Source Voltage Shift: N/A

PWM:  SET PWM

READ RESTART PWM MQTT PUBLISH

# Dose measurements: Experimental method

## Experimental setup:

- Two NFC readers are irradiated using a LINAC Siemens Artiste
- Photon beams of 6 MV irradiation field of 20x20 cm<sup>2</sup>.
- 1.5 cm of solid water as a buildup layer.
- Sessions of 3 Gy.

## Measurement protocol:

1. The zero was made with NFC reader by resetting the PWM and measure the direct and amplified source voltage
2. The total area of the tag were irradiated (Siemens Artiste)
3. After 3 minutes the source voltage was measured again
4. The voltage shift was calculated
5. Finally, the PWM is restarted and repeat the process every 15 minutes

# Results

## DosiTag 1

## DosiTag 2

	Sensitivity (mV/Gy)		Total dose (Gy)	Resolution (cGy)
	LRC	HRC		
DosiTag 1	$4.12 \pm 0.02$	-	57	79
DosiTag 2	$4.35 \pm 0.17$	$4.37 \pm 0.04$	42	2

# Previous work

NFC Tag

Previous NFC Tag

Desk reader

	Sensitivity (mV/Gy)
NFC Tag	$4.37 \pm 0.04$
Previous NFC Tag	$4.64 \pm 0.15$
Desk reader	$4.85 \pm 0.07$

# Improvements over the previous work

Feature	Previous NFC dosimeter	DosiTag	Improvement/novelty
<b>Circuit architecture</b>	Only NFC chip	MCU + NFC chip	Inclusion of MCU allows the full control of the measurement variables (time, start/end, etc.)
<b>NFC chip model</b>	SL13A (AMS)	M24LR64E (STMicroelectronics)	The SL13A chip is a discontinued device
<b>Sensitivity</b>	$(4.75 \pm 0.15)$ mV/Gy	$(4.37 \pm 0.04)$ mV/Gy	Although average sensitivity has slightly been reduced, its associated uncertainty has been significantly reduced
<b>Resolution</b>	17 cGy	2 cGy	Resolution has improved by a factor of 8
<b>Total dose</b>	20 Gy	42 Gy	Total irradiation dose has been increased
<b>Smartphone</b>	Rooting required	No need to root	No root access is needed in the smartphone
<b>Smartphone app</b>	Designed for Android 5.1	Designed for Android 10	Smartphone app has been redesigned and improved. Higher Android versions are supported
<b>IoT capabilities</b>	No IoT implemented	Cloud service (based on MQTT protocol)	Integration with IoT allows classification, distribution and storage of patient's data
<b>Irradiation area</b>	Only sensor module	Whole tag	New version allows the irradiation of the complete dosimeter tag, not only the sensor module
<b>Tag encapsulation</b>	Not possible	Possible	Previous sensor connector made tag encapsulation impossible to be sterilized or submerged in liquids
<b>Holder structure</b>	Ad-hoc wood structure	No structure/holder is required	Previous version required a holder structure to ensure adequate and repeatable energy harvesting

# Costs

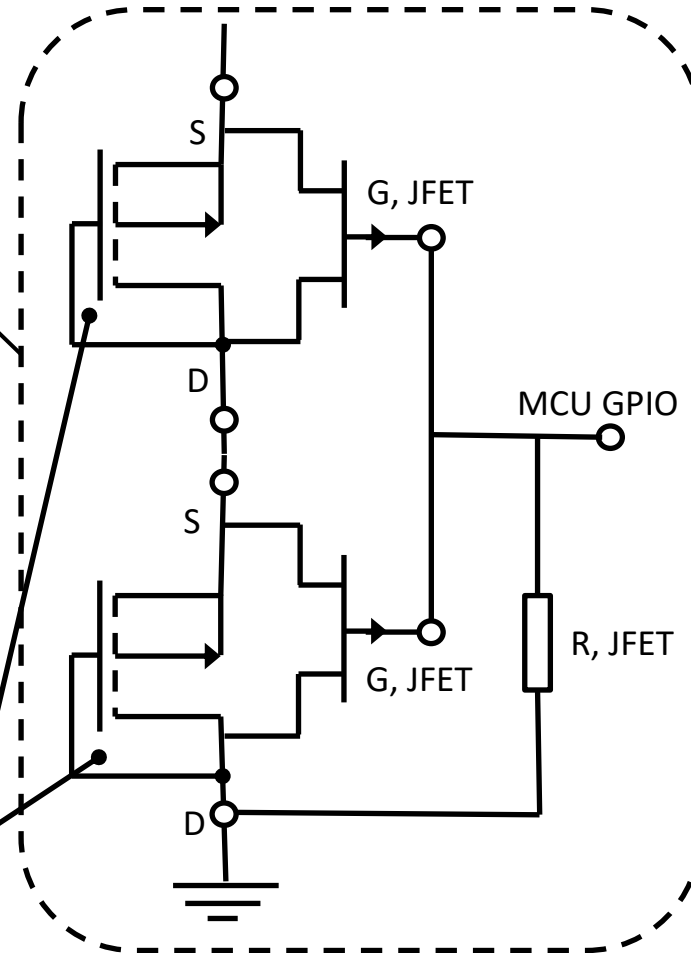

Component	Encapsulation	Manufacturer	Distributor	Ud	Price
<b>PIC16LF1703</b>	SOIC-14	Microchip	RS Components	1	1.521 €
<b>M24LR64E</b>	SOIC-8	ST Microelectronics	RS Components	1	0.929 €
<b>ADM660</b>	SOIC-8	Analog Devices	RS Components	1	6.35 €
<b>LM334M</b>	SOIC-8	Texas Instruments	RS Components	1	1.467 €
<b>1N4148</b>	SOD-123	Vishay	RS Components	5	0.13 €

# In development

## Sensor module

CD4007

**Sensitivity of each  
pMOS:**  
 $(5.27 \pm 0.07) \text{ mV/Gy}$

**Different chips:**  
Avoid the body effect

# In development

## Thermal compensation CD4007

- Easier thermal compensation
- No additional devices are required

# In development

## Current source

$$I = \frac{V_{ref}}{R_{SC}}$$

## Voltage follower

- Avoid the current subtraction of the PMOS source

# In development

## JFET gate control

- The microcontroller performs multiple measurements
- No smartphone root is required

# Conclusions

- The NFC reader topology is suitable for dose measurements
- The inclusion of the Internet of Things (IoT) facilitates the classification and storage of the data
- A very good inductive coupling is necessary to harvest enough energy
- Higher resolution than the previous NFC reader is achieved (17 cGy vs. 2 cGy).
- The whole tag was irradiated
- The system is still accurate after high doses of radiation, so it can have several uses
- Very good linearity is shown.
- A good sensitivity of  $(4.37 \pm 0.04)$  mV/Gy is shown

# Current and future tasks

- Test and validate the new design with the CD4007 pMOS transistor
- Laminate the card
- System construction in a flexible substrate
- Improve the database for storing the measurements
